

Increasing the Development of Environment-friendly Products

In order to satisfy the interests and demands for environmental management by internal and external stakeholders such as employees, customers, and the government, Shinhan Financial Group is introducing various financial products that encourage Environment-friendly life for customers, and support companies that lead Environment-friendly industries.

Shinhan Bank is making contributions to reduce inefficient energy use by providing preliminary support for LED replacement costs in apartments and public institutions and by developing 'Green Energy Factoring' for users, which enables payment of construction expenses by reduced electricity costs. The bank is also operating a loan product called 'Green Remodeling Interest Subsidy Loan' for customers planning to remodel their buildings with the purpose of improving energy efficiency. Under this project, the bank supports construction expenses and the government supports 2-4% of loan interest depending on the level of energy improvement. Furthermore, Shinhan Bank also provides 'Shinhan Green+ Installment Savings,' a deposit product which provides an additional interest rate up to 0.3% when fulfilling conditions for Green benefits by using public transportation and by saving electricity and gas expenses, thereby encouraging customers to practice energy reduction in their daily lives.

Shinhan Life Insurance and Shinhan BNP Paribas Asset Management are operating variable insurance products which make investments in companies with high sustainability through the SRI(Socially Responsible Investment) Fund, which invests in stocks related to society, environment, and energy reduction, as well as other relevant funds.

Through 'Small Car Oil Tax Refund Card', which returns a portion of oil tax to owners of compact cars, Shinhan Card is making contributions to reduce air pollution and improve energy efficiency by promoting the usage of small cars.

Shinhan Financial Group, Role of Green Finance

Resource Reduction Effect through Green Energy Factoring

Reduced Amount of Greenhouse Gases	5,694tCO ₂ eq
Reduced Energy Consumption	12,384MWh

Product Name	Product Explanation	Billings
Green Energy Factoring	The product supports the expenses used in replacing the LED light bulbs of underground parking lots to reduce energy costs, and the customers pay back the construction costs with the money saved from using less energy.	KRW 8,138 million (Total as of end of 2015)
